PROFESSIONAL SUMMARY

Data Scientist with 2+ years driving commercial excellence and operational strategy through advanced analytics and machine learning. Delivered $150K+ quantified value through predictive modeling, enterprise analytics infrastructure, and strategic business intelligence across medical devices, public sector, and consulting. Duke Fuqua Graduate combining technical expertise in Python, SQL, and ML with strategic business acumen to transform data into actionable insights that optimize revenue and operational performance.

EDUCATION

DUKE UNIVERSITY, **The Fuqua School of Business** — Durham, NC

Master of Science in Quantitative Management: Business Analytics, Strategy Track — *May 2024*

GPA 3.65/4; Merit Scholar; Graduate Research Assistant: Econometrics, Network Theory

Data Science Coursework: Data Science for Business, Decision Analytics & Modeling, Modern Analytics, Data Visualization

Strategy Coursework: Strategic Management, Operations & People Analytics, Empirical Economic Analysis

SRM UNIVERSITY — Chennai, India

Bachelor of Computer Science Engineering, Specialization in Artificial Intelligence and Machine Learning — *May 2022*

GPA 9.13/10; Chief Student Editor, University Newsletter

Key Coursework: Artificial Neural Networks, Statistical Machine Learning, Deep Learning, Natural Language Processing, Computer Vision

EXPERIENCE

COOPER SURGICAL – ***Data Scientist, Commercial Excellence*** — Trumbull, CT — *Jul 2025 – Present*

- Drive commercial excellence for the Medical Device Business, independently managing strategic initiatives including the Annual Operating Plan development, annual quota allocation for 70+ managers, optimizing territory balance and sales capacity planning.
- Built end-to-end pipeline processing transaction records, establishing PowerBI/SQL/Azure analytics infrastructure reducing executive reporting time and enabling real-time performance monitoring.
- Partner directly with C-suite stakeholders (Director of Marketing, Director of Sales, Director of Business Analytics) to translate business requirements into data-driven strategies, delivering insights informing product launch decisions.
- Develop ensemble forecasting models (ARIMA, SARIMAX, Prophet, XGBoost) predicting demand, enabling proactive business
- Performed complex scenario modeling and sensitivity analysis supporting strategic decisions across 20+ product lines.

WESTERN VIRGINIA WATER AUTHORITY – ***Data Scientist, Planning and Asset Management*** — Roanoke, VA — *Jan 2025 – Jul 2025*

- Led independent machine learning initiative to predict infrastructure asset failure 6-12 months in advance by integrating environmental, operational, and 20+ years of maintenance historical data, enabling proactive replacement of high-risk water mains and directing adding $150K in value.
- Designed and deployed dynamic dashboards leveraging real-time data from CMMS (Computerized Maintenance Management System) data, establishing KPIs that improved cross-departmental visibility into asset health and informed executive decision-making.
- Collaborated with the Engineering, GIS, HR, and administrative team to build analytics framework supporting 5-year capital planning for critical water infrastructure serving the residents of Western Virginia.

DUKE UNIVERSITY, The Nicholas School *of* Environment – ***Data & Marketing Specialist*** — Durham, NC — Oct 2023 – Oct 2024

- Developed and executed data-driven marketing strategies using Python, Tableau, and ArcGIS to promote executive environmental education programs, analyze audience segmentation data to optimize campaign targeting.
- Conducted market research and multivariate analysis identifying high-value audience segments, increasing engagement by 40% while reducing costs by 20%.
- Built automated Python reporting pipeline tracking marketing campaign performance, enabling real-time optimization and informing curriculum development for executive education programs.

DUKE UNIVERSITY CAPSTONE FOR PINNACLE FERTILITY – *Data Scientist* Scottsdale, AZ

- Led development and deployment of Natural Language Processing sentiment analysis models processing 50K+ patient records to evaluate patient experience across 12 healthcare facilities, identifying key drivers of satisfaction informing operational improvements. Mar – May 2024
- Implemented predictive analytics techniques to forecast patient sentiments through interactions, informing proactive healthcare strategies, and personalized patient care interventions.

DELOITTE, STRATEGY & ANALYTICS – *Data Analyst* Bengaluru, India *Jan – Jun 2023*

- Led team of five analysts through comprehensive sales data leveraging Hadoop, Hive, PowerBI and AWS to process millions of transaction records and generate strategic insights shaping marketing campaigns.
- Built Machine Learning models to analyze blockchain transaction data, delivering foundational insights that informed development of internal data platforms and created framework for client product innovation.
- Developed and implemented ETL solutions that streamlined data processing workflows, improving data quality for downstream analytics applications.

SIEMENS – *Head PCS (Distributed Control System) Technical Intern - Dev. Natural Language Processing* Bengaluru, India *Jun – Aug 2021*

- Analyzed global manufacturing datasets from 15+ global facilities and built interactive dashboards tracking operational KPIs for process optimization.
- Developed Natural Language Processing proof-of-concept for automating control system documentation.

SELECTED PROJECTS & RESEARCH

Streamlining Operations and Animal Adoption for The Blue Cross of India (Python, Tableau, Excel)
Directed six-month analytics engagement for one of India's largest animal welfare non-profit organizations, designing and implementing data pipelines processing rescue, adoption records. Increased adoption rates by ~5% through predictive analytics and targeted marketing campaigns, impacting outcomes for the shelter animals.

Evaluating the Causal Impact of ESG on Financial Performance (R, Excel)
Employed advanced causal inference techniques including propensity score matching, difference-in-difference, and fixed effects models to analyze how ESG criteria influence financial performance across S&P 500 companies, controlling for selection bias and confounding variables to evaluate robust causal relationships.

TECHNICAL CAPABILITIES

Programming & Data: Python, R, SQL, Advanced Excel, Git. **Visualization & BI:** PowerBI, Tableau, Looker, ArcGIS. **Machine Learning:** Regression, Classification, Clustering, Neural Networks, Time Series Forecasting, Natural Language Processing, Computer Vision **Analytics & Statistics:** Predictive Analytics, A/B Testing, Statistical Modeling, Causal Inference, Hypothesis Testing. **Cloud & Big Data:** AWS, Azure, Hadoop, PySpark, Kafka. **Methodologies:** ETL, Data Warehousing, Agile, CI/CD, Data Visualization, Business Intelligence, Strategic Analytics

ADDITIONAL INFORMATION

Duke Women's Lacrosse, Performance Analytics (SQL, Tableau, Python) ETL, Data Visualization – ETL Pipelines and interactive dashboards using SQL, Tableau, and Python to track player performance metrics, injury prevention indicators, and game strategy insights for Division I athletics.

Hind Towards Change, Director Counseled a team of 150+ and supervised 12 core members across Operations, Finance, HR, and Media functions. Directed initiatives aligned with UN Sustainable Development Goals addressing socio-economic challenges.
